

## Balancing Food & Play

The ***Balancing Food & Play*** curriculum was designed to improve knowledge and behaviors related to the following four educational constructs:

- Snacking on fruits and vegetables,
- Drinking milk with meals and water with snacks,
- Encouraging 60 minutes of physical activity each day, and
- Limiting screen time to two hours or less per day.

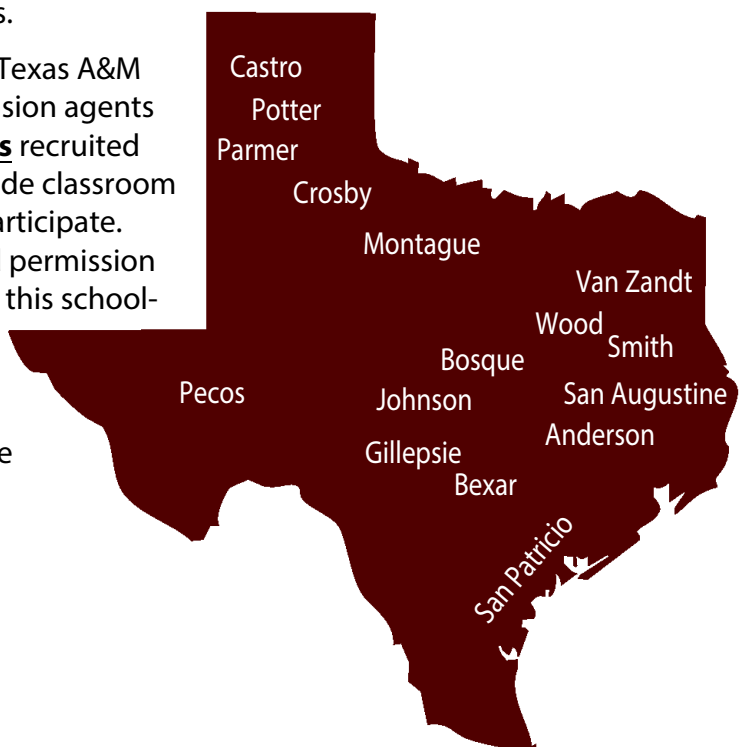

The curriculum contains four elements: 20 lesson plans, eight take-home reading assignments, four parent letters, and a 41-page journal for each student. The second edition of the ***Balancing Food & Play*** curriculum incorporates the Food Guidance System called *MyPlate*. The *MyPlate* icon serves as a reminder for healthy eating and illustrates the five food groups.

### Relevance

Too many adults and children weigh too much. Texas is now the tenth most obese state in the nation. The obesity rate among children is especially concerning, as it foretells a lifelong struggle with weight-related poor health — and its associated increased need for medical care. Best practice behaviors associated with healthful weight have been identified and include an eating pattern consistent with *MyPlate*, increasing physical activity, and decreasing sedentary behaviors. For children to adopt best practice behaviors, education, skills building, family engagement, and community support are required. School-based interventions, which include family engagement, augment and reinforce other obesity efforts.

During 2019, Texas A&M AgriLife Extension agents in **16 counties** recruited local third grade classroom teachers to participate. They received permission to implement this school-enrichment program, and **640** students completed the curriculum. (N = 640)
